Lot No.: 1E8 **Lot-specific information**

Olerup SSP® DQ-DR SSP Combi Tray

Product number:	**101.704-48/12 – including *Taq* pol.** **101.704-48u/12u – without *Taq* pol.**
Lot number:	**1E8**
Expiry date:	**2019-03-01**
Number of tests:	**48 tests – Product No. 101.704-48/48u** **12 tests – Product No. 101.704-12/12u**
Number of wells per test:	**45 + 1**
Storage - pre-aliquoted primers:	**dark at -20ºC**
- PCR Master Mix:	**-20ºC**
- Adhesive PCR seals	**RT**
- Product Insert	**RT**

This Product Description is only valid for Lot No. 1E8.

Complete product documentation consists of generic Instructions for Use (IFU), lot specific Product Insert, Worksheet and Certificate.

CHANGES COMPARED TO THE PREVIOUS *OLERUP* SSP® DQ-DR SSP COMBI TRAY LOT (6D2)

The format of the Product Insert and Worksheet have been changed.

The DQ-DR kit has been redesigned and improved with regards to allelic detection and discrimination and facilitated interpretation.

The DQ low resolution specificity and interpretation tables have been updated for the HLA-DQB1 alleles described since the previous *Olerup* SSP® DQ-DR Combi Tray lot was made **(Lot No. 6D2)**. The kit design is based on IMGT/HLA database 3.24.0.

The primers of the wells detailed below have been exchanged, added or modified compared to the previous lot.

Well	5'-primer	3'-primer	rationale
2	-	Added	3'-primer added for the DQB1*06:199 allele.
8	Added	Added	5'-primer added for the DQB1*04:30 allele, 3'-primer added for the DQB1*04:02:08 allele.

CE 0088 For *In Vitro* Diagnostic Use

Lot No.: 1E8 **Lot-specific information**

The DR low resolution specificity and interpretation tables have been updated for the HLA-DRB1 alleles described since the previous *Olerup* SSP® DQ-DR Combi Tray lot was made **(Lot No. 6D2)**. The kit design is based on IMGT/HLA database 3.24.0.

The primers of the wells detailed below have been exchanged, modified or added compared to the previous lot.

Well	5'-primer	3'-primer	rationale
17	-	Added	3'-primer added for the DRB1*15:129 allele.
19	-	Added	3'-primers added for improved HLA-specific amplification of the DRB1*03:17 and 03:97 alleles.
24	Added	-	5'-primer added for the DRB1*10:11 allele.
26	-	Added	3'-primer added for the DRB1*03:126 allele.
27	-	Added	3'-primer added for the DRB1*11:04:13 allele.
35	Added	-	5'-primer added for increased yield of the DRB1*08:14 allele.
43	Added	-	5'-primer added for the DRB1*10:11 allele.
44	Added	Added	Primer pair added for the DRB4*02:01N and DRB1*03:01N alleles.

Changes in revision R01 compared to R00:

1. Due to sharing of sequence motifs in codon 38 and 47, DRB3*01:14 will also be amplified in primer mixes 19, 20 and 31 and DRB3*01:23 and *02:32 in mix 19, in addition to primer mix 43.
2. The DRB1*13:02:02 allele is amplified in primer mix 20.
   The Specificity and Interpretation Tables have been changed.

Changes in revision R02 compared to R01:

1. Primer mix 17 does not amplify the DRB1*16:05:01-16:05:02 and 16:07 alleles. This has been corrected in the Specificity and Interpretation Tables.

Change in revision R03 compared to R02:

1. Primer mix 20 does not amplify the DRB1*14:137N and 14:152N alleles. Primer mix 29 does not amplify the DRB1*14:137N allele. This has been corrected in the Specificity and Interpretation Tables.

101.704-48/12 – including *Taq* pol., IFU-01
101.704-48u/12u – without *Taq* pol., IFU-02

Lot No.: 1E8 **Lot-specific information**

Well **46** contains Negative Control primer pairs, that will amplify more than 95% of the *Olerup* SSP® HLA Class I, DRB, DQB1, DPB1 and DQA1 amplicons as well as all the amplicons generated by the control primer pairs matching the human growth hormone gene.

HLA-specific PCR product sizes range from 75 to 200 base pairs.
The PCR product generated by the positive control primer pair is 430 base pairs.

[1]The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codonnumbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.
[2]The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon or the 2nd intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot No.: 1E8 **Lot-specific information**

PRODUCT DESCRIPTION

DQ-DR SSP Combi Tray

CONTENT

The primer set contains 5'- and 3'-primers for grouping the DQB1 alleles in to the serological groups DQ2 to DQ9.
The primer set contains 5'- and 3'-primers for grouping the DRB1*01:01 to DRB1*10:16 alleles into the corresponding serological groups DR1 to DR18 as well as primer pairs for recognizing the DRB3, DRB4 and DRB5 groups of alleles.

Please note that DQB1 amplifications usually are somewhat less pronounced than e.g. DRB and DQA1 amplifications even when using the same DNA preparation and exactly the same experimental procedures.

PLATE LAYOUT

Each test consists of 46 PCR reactions in a 48 well cut PCR plate. Wells 47 and 48 are empty.

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	24
25	26	27	28	29	30	31	NC
33	34	35	36	37	38	39	40
41	42	43	44	45	NC	empty	empty

The 48 well cut PCR plate is marked with 'DQ-DR'.
Well No. 1 is marked with the Lot No. '1E8' in silver/gray ink.
Wells 1 to 14 – DQ low resolution primers.
Wells 15 to 45 – DR low resolution primers.
Well 46 – Negative Control (NC).
A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.
The PCR plates are covered with a PCR-compatible foil.
Please note: When removing each 48 well PCR plate, make sure that the remaining plates stay covered. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

Only the DQB1 alleles will be amplified by the 14 wells of the DQ low resolution primer set, **wells 1 to 14**. Thus, the interpretation of DQ low resolution typings is not influenced by the DQB2 and DQB3 genes.
Only HLA-DRB alleles will be amplified by the 31 wells of the DR low resolution primer set, **wells 15 to 45**. Thus, the interpretation of DR low resolution typings is not influenced by other HLA class II genes.

101.704-48/12 – including *Taq* pol., IFU-01

Lot No.: 1E8 **Lot-specific information**

UNIQUELY IDENTIFIED ALLELES

All the DQB1 alleles, i.e. **DQB1*05:01 to 05:119, DQB1*06:01 to 06:202, DQB1*02:01 to 02:67N, DQB1*03:01 to 03:224 and DQB1*04:01 to 04:34**, recognized by the HLA Nomenclature Committee in April 2016[1,2] will be amplified by the primers in the DQ low resolution SSP primer set, **wells 1 to 14**. The DQB1 alleles will be grouped into their corresponding serological specificities[3], i.e.:

DQ5(1) =	DQB1*05:01:01-05:05
DQ6(1) =	DQB1*06:01:01-06:44
DQ2 =	DQB1*02:01:01-02:05
DQ3 =	DQB1*03:06, 03:10, 03:14
DQ7(3) =	DQB1*03:01:01-03:01:06, 03:04, 03:09, 03:13, 03:16, 03:19
DQ8(3) =	DQB1*03:02:01-03:02:05, 03:05:01-03:05:04, 03:07-03:08, 03:11, 03:18
DQ9(3) =	DQB1*03:03:02:01-03:03:04, 03:12, 03:15, 03:17, 03:20
DQ4 =	DQB1*04:01-04:02

[1]DQB1 alleles listed on the IMGT/HLA web page 2016-April-15, release 3.24.0, www.ebi.ac.uk/imgt/hla.
[2]Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page http://hla.alleles.org/alleles/deleted.html.
[3]The serological split of the DQB1*05:05 to 05:119 alleles, the DQB1*06:06 to 06:07, 06:10, 06:13, 06:15-06:24 and 06:27 to 06:202 alleles, the DQB1*02:04-02:67N alleles, the DQB1*03:07-03:09 and 03:11 to 03:224 alleles and the DQB1:04:03:01-04:34 alleles is not known. In this table we have used the expert-assigned serological grouping in Tissue Antigens (2009) 73:95-170, and also inferred the serological grouping from the naming of the sequence-defined allele.

All the HLA-DRB1, -DRB3, -DRB4[1] and -DRB5 alleles, i.e. **DRB1*01:01 to DRB1*16:38, DRB3*01:01 to DRB3*03:06, DRB4*01:01 to DRB4*03:01N and DRB5*01:01 to DRB5*02:07**, recognized by the HLA Nomenclature Committee in April 2016[1,2] will be amplified by the primers in the DR low resolution SSP kit. The HLA-DRB alleles will be grouped into their corresponding serological specificities[3].

[1]DRB alleles listed on the IMGT/HLA web page 2016-April-15, release 3.24.0, www.ebi.ac.uk/imgt/hla.
[2]Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page http://hla.alleles.org/alleles/deleted.html.
[3]The serological split of all DRB1 alleles is not known. In this table we use the expert-assigned serological grouping in Tissue Antigens (2009) 73:95-170 and the serological grouping of the sequence-defined allele.

[1]Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of DQ low resolution SSP subtypings.
When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.
Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.
PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.
PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.
Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

[2]The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases. In the presence of a specific amplification the intensity of the control band often decreases.

[3]The serological reactivity of all DQ alleles is not known. In this table we use the expert-assigned serological grouping in Tissue Antigens (2009) 73:95-170 and the serological grouping of the sequence-defined allele. The DQB1*03:10 allele has been assigned type DQ7 by NMDP.

[4]For several DQB1 alleles 1st and/or 3rd exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

[5]HLA-specific PCR products shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR products.

[6]Primer mixes 4, 7, 9 and 12 may give rise to a lower yield of HLA-specific PCR product than the other DQ low primer mixes, most pronounced in primer mixes 4, 7 and 12.

[7]Primer mix 13 may have a tendency of unspecific amplification.

[8]The primer pairs in wells 1, 2, 4 and 8 will in some samples give rise to two HLA-specific PCR fragments.

'w', may be weakly amplified.
'?', nucleotide sequence information not available for the primer matching sequence.

Lot No.: 1E8 **Lot-specific information**

SPECIFICITY TABLE

DR low resolution primer set

Specificities and sizes of the PCR products of the 31+1 primer mixes of the DR low resolution primer set

[1]Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of DR low resolution SSP subtypings.
When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.
Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.
PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.
PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.
Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

[2]The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 15 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases. In the presence of a specific amplification the intensity of the control band often decreases.

[3]The serological split of all DRB1 alleles is not known. In this table we use the expert-assigned serological grouping in Tissue Antigens (2009) 73:95-170 and the serological grouping of the sequence-defined allele.

[4]For several DRB1 alleles 1st and/or 3rd exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

[5]HLA-Specific PCR fragments shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR bands.

[6]Individual alleles can give to rise to two differently sized specific PCR fragments in primer mixes 15, 19 to 22, 24, 25, 27, 28, 30, 32 to 34, 36, 41 and 43.

Lot No.: 1E8 **Lot-specific information**

[7]Due to sharing of sequence motifs in codon 38 and 47, DRB3*01:14 will also be amplified in primer mixes 19, 20 and 31 and DRB3*01:23 and *02:32 in mix 13, in addition to primer mix 43.

[8]Due to sharing of sequence motifs, DRB3*02:27 is amplified by the primer pairs in well 29 in addition to primer mix 43.

[9]DRB5*01:08N is amplified by the primer pairs in well 38 in addition to primer mix 45.

[10]Primer mixes 15, 17, 30, 33 and 36 may have a tendency of giving rise to primer oligomer formation.

[11]Primer mix 33 has a tendency of giving rise to an intense primer cloud due to the high number of primers present in the primer mix.

[12]Primer mixes 17, 18 and 23 may have a tendency of unspecific amplification.

[13]Primer mix 46 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by the control primer pairs matching the human growth hormone gene. HLA-specific PCR product sizes range from 75 to 200 base pairs and the PCR product generated by the HGH positive control primer pair is 430 base pairs.

'w', might be weakly amplified.

'?', nucleotide sequence information not available for the primer matching sequence.

[1]The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 15 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

101.704-48/12 – including *Taq* pol., IFU-01
101.704-48u/12u – without *Taq* pol., IFU-02

Visit www.olerup.com for
"Instructions for Use" (IFU)

Lot No.: 1E8 **Lot-specific information**

[2]The nucleotide position matching the specificity-determining 3'-end of the primer is given. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

[3]The nucleotide position matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot No.: 1E8 **Lot-specific information**

[1]The provided cell line HLA specificities are retrieved from the http://www.ihwg.org/hla web site.
The specificity of an individual cell line may thus be subject to change.

[2]The specificity of each primer solution in the kit has been tested against 48 well characterized cell line DNAs and where applicable, additional cell line DNAs.
One 5'-primer and one or more 3'primers in primer solution 2, 18, 25, 26, 32 and 41 were tested by separately adding additional 5'-primers or 3'-primers.
One or more additional 3'-primers in primer solution 1, 10, 15, 17, 19, 23, 24, 34 and 36 were tested by separately adding another 5'-primer.
One 5'-primer in primer solutions 7, 20, 29, 30 and 43 was tested by separately adding additional 3'-primers.
In primer solutions 1, 2, 4, 5, 7, 13, 15, 17 to 20, 23, 27, 29, 35, 40 and 44 one or more 3'-primers were not possible to test, and in primer solutions 1 to 3, 5, 15, 17, 18, 22 to 24, 27 to 30, 34 to 36 and 41 one or more 5'-primers were not possible to test.
