Lot No.: **5K9**

Lot-specific information
Olerup SSP® DRB1*03

Product number:	101.113-24/04 – including <i>Taq</i> pol. 101.113-24u/04u – without <i>Taq</i> pol.
Lot number:	5K9
Expiry date:	2023-12-01
Number of tests:	24 tests – Product No. 101.113-24/24u 4 tests – Product No. 101.113-04/04u
Number of wells per test:	31+1
Storage - pre-aliquoted primers:	dark at -20°C
- PCR Master Mix:	-20°C
- Adhesive PCR seals	RT
- Product Insert	RT

This Product Description is only valid for Lot No. 5K9.

Complete product documentation consists of generic Instructions for Use (IFU), lot specific Product Insert, Worksheet and Certificate.

**CHANGES COMPARED TO THE PREVIOUS OLERUP SSP®
DRB1*03 LOT (3G3)**

- The product documentation has been updated for new alleles of IMGT 3.37.0
- The kit resolution focuses on common and well documented (CWD) alleles¹.

¹As described in section Uniquely Identified Alleles.

The DRB1*03 primer set, specificity and interpretation tables have been updated for the DRB1 alleles described since the previous *Olerup SSP®* DRB1*03 lot was made (**Lot No. 3G3**).

The DRB1*03 primer set is unchanged compared to the previous *Olerup SSP®* DRB1*03 lot (**Lot No. 3G3**).

Lot-specific information

Well 32 contains Negative Control primer pairs, that will amplify a majority of the *Olerup* SSP[®] HLA Class I, DRB, DQB1, DPB1 and DQA1 amplicons as well as all the amplicons generated by the control primer pairs matching the human growth hormone gene.

HLA-specific PCR product sizes range from 75 to 200 base pairs.
The PCR product generated by the positive control primer pair is 200 base pairs.

Length of PCR product	105	200	105	80	75	80	85

¹The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

²The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon or the 2nd intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

101.113-24/04 – including *Taq* polymerase, IFU-01
101.113-24u/04u – without *Taq* polymerase, IFU-02

Lot No.: **5K9**

Lot-specific information
PRODUCT DESCRIPTION

DRB1*03 SSP subtyping

CONTENT

The primer set contains 5'- and 3'-primers for identifying the DRB1*03:01 to DRB1*03:163 alleles.

PLATE LAYOUT

Each test consists of 32 PCR reactions in a 32 well cut PCR plate.

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	24
25	26	27	28	29	30	31	NC

The 32 well cut PCR plate is marked with 'DRB1*03' in silver/gray ink.

Well No. 1 is marked with the Lot No. '5K9'.

Wells 1 to 31 – DRB1*03 high resolution primers.

Well 32 – Negative Control (NC).

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.

The PCR plates are heat-sealed with a PCR-compatible foil.

Please note: When removing each 32 well PCR plate, make sure that the remaining plates stay sealed. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

Due to the sharing of sequence motifs within the DR52 group of DRB1 alleles, non-DRB1*03 alleles will be amplified by primer some mixes. For further details see Specificity Table.

UNIQUELY IDENTIFIED ALLELES

All the phenotypically different DRB1*03 alleles, i.e. **DRB1*03:01 to DRB1*03:163**, recognized by the HLA Nomenclature Committee in July 2019^{1,2} will be amplified by the primers in the DRB1*03 subtyping kit³.

The DRB1*03 kit enables separation of the confirmed DRB1*03 alleles as listed in the IMGT/HLA database 3.26.0. An HLA allele is listed as confirmed by IMGT/HLA if it has been sequenced by more than a single laboratory or from multiple sources. Current allele confirmation status for DRB1*03 alleles is listed below.

The DRB1*03 kit also enables identification of many null and alternatively expressed alleles.

101.113-24/04 – including *Taq* polymerase, IFU-01
101.113-24u/04u – without *Taq* polymerase, IFU-02

Visit <https://labproducts.caredx.com> for
“Instructions for Use” (IFU)

Lot No.: 5K9

Lot-specific information

The following DRB1*03 alleles can be distinguished by the different sizes of the specific PCR product:

Alleles	Primer mix
DRB1*03:18, 03:48	22
DRB1*03:20, 03:93	17

¹DRB1 alleles listed on the IMGT/HLA web page 2019-July-10, release 3.37.0, www.ebi.ac.uk/imgt/hla.

²Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page <http://hla.alleles.org/alleles/deleted.html>.

³The DRB1*03 primer set cannot separate the DRB1*03:97 and the 14:33 alleles. These alleles can be distinguished by the DR low resolution kit and/or the DRB1*14 high resolution kit.

The DRB1*03 primer set cannot separate the DRB1*03:126 and the 14:95 alleles. These alleles can be distinguished by the DR low resolution kit and/or the DRB1*14 high resolution kit.

The DRB1*03 primer set cannot separate the DRB1*03:35 and the 14:127:01-14:127:02 alleles. These alleles can be distinguished by the DR low resolution kit and/or the DRB1*14 high resolution kit.

RESOLUTION IN HOMO- AND HETEROZYGOTES

Results file with resolution in DRB1*03 homo- and heterozygotes is available upon request.

101.113-24/04 – including *Taq* polymerase, IFU-01
101.113-24u/04u – without *Taq* polymerase, IFU-02

32⁷	Negative Control			

¹Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of DRB1*03 SSP subtypings.

When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherent feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

²The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

³For several DRB1 alleles 1st and/or 3rd exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

⁴HLA-specific PCR products shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR products.

⁵Primer mixes 6, 22 and 23 may have a tendency of giving rise to primer oligomer formation.

⁶Primer mixes 2 and 24 may give rise to a lower yield of specific PCR product than the other DRB1*03 primer mixes.

⁷Primer mix 32 contains a negative control, which will amplify a majority of HLA amplicons as well as the amplicons generated by the control primer pairs matching the human growth hormone gene. HLA-specific PCR

101.113-24/04 – including *Taq* polymerase, IFU-01
101.113-24u/04u – without *Taq* polymerase, IFU-02

Well No.	25	26	27	28	29	30	31

¹The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

²The nucleotide position matching the specificity-determining 3'-end of the primer is given. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

³The nucleotide position matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

101.113-24/04 – including *Taq* polymerase, IFU-01
101.113-24u/04u – without *Taq* polymerase, IFU-02

Lot No.: 5K9

Lot-specific information

¹The provided cell line HLA specificities are retrieved from the <http://www.ihwg.org/hla> web site. The specificity of an individual cell line may thus be subject to change.

²The specificity of each primer solution in the kit has been tested against 48 well characterized cell line DNAs and where applicable, additional cell line DNAs.

No DNAs carrying the alleles to be amplified by primer solutions 7, 11 to 17, 20 to 23, 25 to 29 and 31 were available. The specificities of the primers in primer solutions 7, 11 to 17, 21, 26 to 29 and 31 were tested by separately adding one, two or three additional 5'-primers, respectively one or two additional 3'-primers. In primer solutions 25 it was only possible to test the 3'-primer, the 5'-primers were not possible to test. In primer solutions 20, 22 and 23 it was only possible to test the 5'-primers, the 3'-primers were not possible to test. In primer solutions 6, 7, 11 to 17, 27 and 30 one or more of the 3'-primers were not possible to test.

In primer solutions 18, 21, 28, 29 and 31 one or more of the 5'-primers were not possible to test. In primer solutions 3 and 9 one or two additional 3'-primer was tested by adding one or two additional 5'-primers.
