Lot No.: 7F6

Lot-specific information

Olerup SSP® DRB3

Product number:	101.121-24/04 – including <i>Taq</i> pol. 101.121-24u/04u – without <i>Taq</i> pol.
Lot number:	7F6
Expiry date:	2021-12-01
Number of tests:	24 tests – Product No. 101.121-24/24u 4 tests – Product No. 101.121-04/04u
Number of wells per test:	45+1
Storage - pre-aliquoted primers:	dark at -20°C
- PCR Master Mix:	-20°C
- Adhesive PCR seals	RT
- Product Insert	RT

This Product Description is only valid for Lot No. 7F6.

Complete product documentation consists of generic Instructions for Use (IFU), lot specific Product Insert, Worksheet and Certificate.

CHANGES COMPARED TO THE PREVIOUS OLERUP SSP® DRB3 LOT (2E8)

The DRB3 kit is updated to enable separation of:

- Confirmed DRB3 alleles as listed in the IMGT/HLA database¹
- Polymorphisms in exons outside of the region encoding the peptide binding domain
- Null and Alternatively expressed alleles

The format of the Worksheet has been changed.

Seven wells have been added to DRB3, wells **40 to 46**.

¹As described in section Uniquely Identified Alleles.

The DRB3 primer set as well as the specificity and interpretation tables have been updated for the DRB alleles described since the previous *Olerup SSP®* DRB3 lot (**Lot No. 2E8**) was made. The kit design is based on IMGT/HLA database 3.29.0.

101.121-24/04 – including *Taq* pol., IFU-01
101.121-24u/04u – without *Taq* pol., IFU-02

Lot No.: **7F6**

Lot-specific information

The primers of the wells detailed below have been exchanged, added or modified compared to the previous lot.

Well	5'-primer	3'-primer	rationale
2	Added	-	5'-primer added for the DRB3*03:01:04 allele.
20	-	Added	3'-primer added for the DRB3*01:01:08 allele.
21	-	Added	3'-primer added for the DRB3*02:43 allele.
25	-	Added	3'-primer added for the DRB3*02:60 allele.
28	-	Added	3'-primer added for the DRB3*02:55N allele.
29	-	Modified	3'-primer modified for increased yield.
33	-	-	Primers have been optimized for increased yield.
34	Added	Added	Primer pair added for the DRB3*01:43 allele.
35	-	Added	3'-primer added for the DRB3*02:51 allele.
36	-	Added	3'-primers added for the DRB3*01:35 and DRB3*02:43 alleles.
37	-	Added	3'-primers added for the DRB3*01:31, DRB3*01:45 and DRB3*02:47 alleles.
39	Added	Added	Negative control moved to well 46, primer pairs added for the DRB3*01:40N and DRB3*02:39 alleles.
40	New	New	New primer mix added for the DRB3*01:30 and DRB3*03:13 alleles.
41	New	New	New primer mix added for the DRB3*02:57 and DRB3*02:60 alleles.
42	New	New	New primer mix added for the DRB3*01:37, DRB3*02:61Q and DRB3*03:08 alleles.
43	New	New	New primer mix added for the DRB3*02:47 allele.
44	New	New	New primer mix added for the DRB3*01:26N and DRB3*02:55N alleles.
45	New	New	New primer mix added for the DRB3*02:31:02 allele.
46	-	-	Negative Control added from well 39.

Changes in revision R01 compared to R00:

1. The expiration date has been altered due to extension of shelf-life.

101.121-24/04 – including *Taq* pol., IFU-01
101.121-24u/04u – without *Taq* pol., IFU-02

Lot No.: **7F6**

Lot-specific information

Well **46** contains Negative Control primer pairs, that will amplify more than 95% of the Olerup SSP[®] HLA Class I, DRB, DQB1, DPB1 and DQA1 amplicons as well as all the amplicons generated by the control primer pairs matching the human growth hormone gene.

HLA-specific PCR product sizes range from 75 to 200 base pairs.

The PCR product generated by the positive control primer pair is 430 base pairs.

Length of PCR product	105	200	105	80	75	80	85

¹The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

²The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon or the 2nd intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot No.: **7F6**

Lot-specific information

PRODUCT DESCRIPTION

DRB3 SSP subtyping

CONTENT

The primer set contains 5'- and 3'-primers for identifying the DRB3*01:01 to DRB3*03:13 alleles.

PLATE LAYOUT

Each test consists of 46 PCR reactions in a 48 well cut PCR plate. Wells 47 and 48 are empty.

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	24
25	26	27	28	29	30	31	32
33	34	35	36	37	38	39	40
41	42	43	44	45	NC	empty	empty

The 48 well cut PCR plate is marked with ‘DRB3’ in silver/gray ink.

Well No. 1 is marked with the Lot No. ‘7F6’.

Wells 1 to 45 – DRB3 high resolution primers.

Well 46 – Negative Control (NC).

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded. The PCR plates are covered with a PCR-compatible foil.

Please note: When removing each 48 well PCR plate, make sure that the remaining plates stay covered. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

Due to the sharing of sequence motifs between DRB3 and DRB1 alleles some primer will amplify DRB1 alleles. For further details see Specificity Table.

UNIQUELY IDENTIFIED ALLELES

All the DRB3 alleles, i.e. **DRB3*01:01 to DRB3*01:45, DRB3*02:01 to DRB3*02:65 and DRB3*03:01 to DRB3*03:13**, recognized by the HLA Nomenclature Committee in August 2017^{1,2} will be amplified by the primers in the DRB3 subtyping kit.

The DRB3 kit enables separation of the confirmed DRB3 alleles as listed in the IMGT/HLA database. An HLA allele is listed as confirmed by IMGT/HLA if it has been sequenced by more than a single laboratory or from multiple sources. Current allele confirmation status for DRB3 alleles is listed below.

101.121-24/04 – including *Taq* pol., IFU-01
101.121-24u/04u – without *Taq* pol., IFU-02

Visit <https://labproducts.caredx.com> for
“Instructions for Use” (IFU)

Lot No.: **7F6**

Lot-specific information

The DRB3 kit also enables identification of polymorphisms in exons outside of the region encoding the peptide binding domain and of null and alternatively expressed alleles.

The following DRB3 alleles can be distinguished by the different sizes of the HLA-specific PCR product:

Alleles	Primer mix
DRB3*02:32, 02:34	38

¹DRB alleles listed on the IMGT/HLA web page 2017-August-10, release 3.29.0, www.ebi.ac.uk/imgt/hla.

²Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page <http://hla.alleles.org/alleles/deleted.html>.

RESOLUTION IN HOMO- AND HETEROZYGOTES

Results file with resolution in DRB3 homo- and heterozygotes is available upon request.

45⁴	70 bp	430 bp	*02:31:02
46⁸	-	-	Negative Control

¹Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of DRB3 SSP typings.

When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherent feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

²The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases. In the presence of a specific amplification the intensity of the control band often decreases.

³For several DRB1 alleles 1st and/or 3rd exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

⁴HLA-specific PCR products shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR products.

⁵Primer mixes 9, 10 and 13 may have tendencies of unspecific amplifications.

⁶Primer mix 7, 11, 19, 22 and 46 have a tendency giving rise to primer oligomer formation.

⁷Primer mixes 4, 10 and 29 may give rise to a lower yield of HLA-specific PCR product than the other DRB3 primer mixes.

⁸Primer mix 46 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by the control primer pairs matching the human growth hormone gene. HLA-specific PCR product sizes range from 75 to 200 base pairs and the PCR product generated by the HGH positive control primer pair is 430 base pairs.

‘w’, might be weakly amplified.

‘?’, nucleotide sequence information not available for the primer matching sequence.

Well No.	37	38	39	40	41	42	43	44	45			

¹The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

²The nucleotide position matching the specificity-determining 3'-end of the primer is given. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

³The nucleotide position matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot No.: 7F6

Lot-specific information

¹The provided cell line HLA specificities are retrieved from the <http://www.ihwg.org/hla> web site. The specificity of an individual cell line may thus be subject to change.

²The specificity of each primer solution in the kit has been tested against 48 well characterized cell line DNAs and where applicable, additional cell line DNAs.

³Cell line TEM, IHW 9057, is profiled as DRB3*02:01 by ECACC ((European Collection of Cell Cultures)). However, Olerup SSP AB has shown that this cell line includes the exon 3 polymorphism corresponding to DRB3*02:24. Primer mix 4 amplifies DRB1*14 alleles in the KOSE, IHL and TEM cell lines. The DRB1*10:01 allele is weakly amplified by primer mix 14 in the CH1007 cell line.

No DNAs carrying the alleles to be amplified by primer solutions 5 to 8, 16 to 19, 21 to 23, 25 to 28, 30 to 32 and 34 to 45 were available. The specificities of the primers in primer solutions 5, 7, 8, 16 to 19, 21, 22, 25, 26, 28, 31, 32, 34, 36, 38 and 40 were tested by separately adding additional 5'-primers, respectively additional 3'-primers.

In primer solutions 6, 23, 27, 30, 42 and 45 it was only possible to test the 3'-primer, the 5'-primers were not possible to test. In primer solutions 35, 37, 39, 41, 43 and 44 it was only possible to test the 5'-primer, the 3'-primers were not possible to test.

One, two or three of the 3'-primers in primer solutions 1 to 3, 5, 7, 12, 15, 17, 19, 21, 25, 28, 31, 33, 34, 36 and 38 were not possible to test. In primer solutions 2, 3, 14, 18, 22, 34 and 40 one or two of the 5'-primers were not possible to test. Additional 3'-primers in primer solutions 15, 20 and 24 were tested by separately adding one or two 5'-primers.

101.121-24/04 – including *Taq* pol., IFU-01
101.121-24u/04u – without *Taq* pol., IFU-02
