

Olerup SSP[®] HLA-A*66

Product number:	101.427-06 – including <i>Taq</i> polymerase
Lot number:	34G
Expiry date:	2011-October-01
Number of tests:	6
Number of wells per test:	12
Storage - pre-aliquoted primers:	dark at -20°C
- PCR Master Mix:	-20°C
- Adhesive PCR seals	RT
- Product Insert	RT

This Product Description is only valid for Lot No. 34G.

CHANGES COMPARED TO THE PREVIOUS *OLERUP* SSP[®] HLA-A*66 LOT

The HLA-A*66 specificity and interpretation tables have been updated for the HLA-A alleles described since the previous *Olerup* SSP[®] HLA-A*66 lot was made (Lot No. 28F).

Four wells have been added to the HLA-A*66 kit,
wells **9 to 12**.

The primers of the wells detailed below has been exchanged, added or modified compared to the previous kit.

Well	5'-primer	3'-primer	rationale
1	-	Added	Primer added for the A*6610 allele.
4	Moved	Moved	Primer pair moved to well 9.
9	Added	Added	Primer pair from well 4 for improved resolution of the A*6606 allele.
10	New	New	New primer pair for the A*6609 allele.
11	New	New	New primer pair for the A*6610 allele.
12	New	New	New primer pair for the A*6608 allele.

PRODUCT DESCRIPTION

HLA-A*66 SSP subtyping

CONTENT

The primer set contains 5'- and 3'-primers for identifying the HLA-A*6601 to A*6610 alleles.

PLATE LAYOUT

Each test consists of 12 PCR reactions in a 16 well cut PCR plate.

1	2	3	4	5	6	7	8
9	10	11	12	empty	empty	empty	empty

The 16 well cut PCR plate is marked with 'HLA-A*66' in silver/gray ink.

Well No. 1 is marked with the Lot No. '34G'.

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.

The PCR plates are heat-sealed with a PCR-compatible foil.

Please note: When removing each 16 well PCR plate, make sure that the remaining plates stay sealed. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

The interpretation of HLA-A*66 SSP subtypings will be influenced by the A*01, several A*02 alleles, the A*0343, the A*11, two A*24 alleles, the A*25, the A*26, two A*31 allele, two A*33 alleles, the A*34, the A*36, the A*4301 allele, most A*68 alleles, the A*6901, the A*7410 and the A*8001 alleles when present on the other haplotype.

UNIQUELY IDENTIFIED ALLELES

All the HLA-A*66 alleles, i.e. **A*6601 to A*6610 alleles**, recognized by the HLA Nomenclature Committee in July 2009¹ will give rise to unique amplification patterns by the primers in the HLA-A*66 subtyping kit.

¹HLA-A alleles listed on the IMGT/HLA web page 2009-July-17, release 2.26.0, www.ebi.ac.uk/imgt/hla.

RESOLUTION IN HOMO- AND HETEROZYGOTES

The 10 HLA-A*66 alleles can be combined in 55 homozygous and heterozygous combinations. Fifteen of these genotypes do not give rise to unique amplification patterns. (The different lengths of the specific PCR products in well 5 were not considered in these calculations.)

Lot No.: **34G**

12	220 bp	1070 bp	*6608	*340101 [?] , 340102 [?] , 3405 [?]

¹Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of HLA-A*66 SSP typings.

When the primers in a primer mix can give rise to specific PCR products of more than one length this is indicated if the size difference is 20 base pairs or more. Size differences shorter than 20 base pairs are not given. For high resolution SSP kits the respective lengths of the specific PCR product(s) of the alleles amplified by these primer mixes are given.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherent feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

²The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 1070 base pairs, for most wells, or a band of 800 base pairs, for some wells.

Well number 1 contains the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to help in the correct orientation of the HLA-A*66 subtyping.

In addition, wells number 5 and 6 contain the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to allow kit identification.

In the presence of a specific amplification the intensity of the control band often decreases.

³Due to the sharing of sequence motifs between HLA-A alleles non-HLA-A*66 alleles will be amplified by primer mixes 1 to 3 and 5 to 12.

⁴Specific PCR fragments shorter than 125 base pairs have a lower intensity than longer PCR bands.

⁵Primer mix 1 may give rise to a PCR fragment approx. 500 bp in size. This band should be disregarded in the interpretation of HLA-A*66 subtypings.

⁶Primer mix 5: Specific PCR fragment of 70 bp in the A*0255, 2603, 2606, 2621, 2630, 3324, 6805, 6815 and 6820 alleles. Specific PCR fragment of 100 bp in the A*6604 and A*6607 alleles. ‘w’, might be weakly amplified.

‘?’, nucleotide sequence of the primer matching sequence is not known.

¹The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 1070 base pairs, for most wells, or a band of 800 base pairs, for some wells.

Well number 1 contains the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to help in the correct orientation of the HLA-A*66 subtyping. .

In addition, wells number 5 and 6 contain the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to allow kit identification.

²The nucleotide position, in the 1st, 2nd or 3rd exons, matching the specificity-determining 3'-end of the primer is given. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

³The nucleotide position, in the 2nd or 3rd exons, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

⁴Primer mix 5: Specific PCR fragment of 70 bp in the A*0255, 2603, 2606, 2621, 2630, 3324, 6805, 6815 and 6820 alleles. Specific PCR fragment of 100 bp in the A*6604 and A*6607 alleles. 'w', might be weakly amplified.

'?', nucleotide sequence of the primer matching sequence is not known.

CERTIFICATE OF ANALYSIS

Olerup SSP® HLA-A*66 SSP

Product number: 101.427-06 – including *Taq* polymerase
Lot number: 34G
Expiry date: 2011-October-01
Number of tests: 6
Number of wells per test: 12

Well specifications:

Well No.	Production No.	Well No.	Production No.
1	2009-642-01	9	2009-642-09
2	2008-531-02	10	2009-642-10
3	2008-531-03	11	2009-642-11
4	2009-642-04	12	2009-642-12
5	2008-531-05		
6	2008-531-06		
7	2008-531-07		
8	2008-531-08		

The specificity of each primer solution of the kit has been tested against 48 well characterized IHWC cell line DNAs.

No DNAs carrying the alleles to be amplified by primer solution 11 and 12 were available. The specificities of the primers in primer solution 11 were tested by separately adding one additional 5'-primer, respectively one additional 3'-primer. In primer solution 12 it was only possible to test the 5'-primer, the 3'-primer was not possible to test. The specificities of additional primers in primer solution 5 and 8 were tested by separately adding one additional 5'-primer, and/or one additional 3'-primer. One of the 3'-primers in primer solutions 5 and 8 was not possible to test.

Results: No false positive or false negative amplifications were obtained.

Date of approval: 2009-October-23

Approved by:

Quality Control, Supervisor

Declaration of Conformity

Product name: *Olerup* SSP® HLA-A*66
Product number: 101.427-06
Lot number: 34G

Intended use: HLA-A*66 high resolution histocompatibility testing

Manufacturer: *Olerup* SSP AB
Hasselstigen 1
SE-133 33 Saltsjöbaden, Sweden
Phone: +46-8-717 88 27
Fax: +46-8-717 88 18

We, *Olerup* SSP AB, hereby declare that this product, to which this Declaration of Conformity relates is in conformity with the following Standard(s) and other normative document(s) ISO 9001:2008 and ISO 13485:2003, following the provisions of the 98/79/EC Directive on *in vitro* diagnostic medical devices, Annex II List B, conformity assessed using Annex IV, as transposed into the national laws of the Member States of the European Union.

The Technical Documentation File is maintained at *Olerup* SSP AB, Hasselstigen 1, SE-133 33 Saltsjöbaden, Sweden.

The Authorized Representative located within the Community is: *Olerup* SSP AB.

Notified Body: Lloyd's Register Quality Assurance Limited, Hiramford, Middlemarch Office Village, Siskin Drive, Coventry CV3 4FJ, United Kingdom. (Notified Body number: 0088.)
